

## **MRI, CT AND X-RAY OPTIONS AT CNS**

Your physician has ordered an MRI scan, CT scan or X-Ray for you as part of your care. Your insurance will allow you to use our Imaging Facility or other approved facilities in Tucson. You may select the imaging center of your choice. Our facility is fully accredited by the American College of Radiology (ACR) as are many other local facilities.

### **REASONS YOU MAY WISH TO SELECT OUR IMAGING FACILITY:**

- **Patient Convenience:** Your MRI or CT scan is in the same facility and your physician has nearly immediate access to your images with a qualified neuro-radiologist in our office for the medical interpretation.
- **Potential Cost Savings:** Save time and travel expenses. If you are coming from out of town may appreciate the idea of having the studies and physician appointment in the same location.
- Your neurologist has the convenience of reviewing your MRI or CT scan many times with you during your visit. This can be less convenient with studies from other facilities.
- MRI and CT scans may be added on an urgent and expedited basis. We have the flexibility to add early morning and late evening scans. We also have the ability to add some types of MRI studies on the weekends for patients who have difficulty making appointments Monday through Friday.
- MRI and CT scans may be tailored or customized to your diagnosis.
- The neuro-radiologist can easily compare prior MRI or CT scans to current scans.
- There is nearly immediate access to your physician for diagnosis and other questions regarding ordered exams which can improve the efficiency of your care.
- Our physicians have immediate access to qualified Neuro-Radiologists for consultation about the MRI or CT results.
